Project Status 7/14/14
The Kimball Hall Renovation is in full swing. Recent progress includes asbestos abatement and demolition on the 2nd and 3rd floors, respectively. You may also have noticed the arrival of the job trailer on the parking lot. Currently, more asbestos abatement and selective demolition are taking place on the 2nd through 4th floors. The interior demolition work will be substantially complete by the end of July 2014.

Because the basement and 1st floors of Kimball remain operational during the project, please make sure you keep clear from construction zones. The Logistics diagram is available on the following page for your safety reference.

What to Expect
As the demolition continues, you may hear loud noises. Do not worry; those noises are typical for the demolition of block walls. Additionally, expect to see more of the same safety tents and other hazard warning signs posted by the asbestos abaters.
