Project Status

Interior demolition and asbestos abatement are substantially complete. Spray fireproofing and layout of new interior walls are in progress. The asbestos abaters are back on site. After they complete their interior work, they will move off site until returning later in the Fall semester to abate the curtain wall.

The next significant portion of work are the 3rd & 4th floor restrooms. The two restrooms will be operational by September 5th.

Shutdowns

The compressed air shutdown is on Wed. (8/13) from 8am-12pm. The potable water shutdown is on Sat. (8/16) from 7am-4pm.

What to Expect

You will continue to hear construction noises from the demolition of the upper floors. This includes noises coming from the 3rd & 4th floor restrooms as well. Also expect to see abatement safety hazard signs and tents back on site.
