Job Summary

I work in Google Analytics Team, which is part of Ads & Commerce Product Area of Google. Our products give customers insight on their traffic. This helps customers with their advertising strategy and ultimately brings revenue for Google. I worked on a prototype that does data analysis.

Google provided a lot of training. The first week is dedicated to introductory classes, with additional training available throughout the job. Also each intern is assigned with a host and optionally a mentor, who are available to help.

My work on frontend helps me become a "full-stack engineer," who are able to implement a product from top to bottom. The experience is therefore highly beneficial to me to become a professional. Google maintains a strong and healthy culture, "Googliness", which encourages individuals to "do the right thing."

Google can help with housing with their corporate housing vendor, or one can find their own housing via Craigslist or airbnb. Google also provides an extensive shuttle bus system. Intern team organizes meetups, and individual teams may have team events. There are many gyms on campus.

Working at Google enables you to learn from some of the best engineers in the industry and get a feeling of working in an established corporate environment.
In North America, Google's internship program typically lasts at most 14 weeks, so students seeking to complete 28 weeks of co-op program are encouraged to find another employer to fill the remaining 14 weeks.
