

In Closing... To Drill or Not To Drill?

- **Cracks Group: Yes!**

- The cracks were:

- Mostly moderately fractured
- Continuously steep and deep
- Consistent vertical orientation

- **Location and**

- **Impact Group: Yes!**

- Logical well locations
- Potential benefits to Ithaca and Cornell University
- Minimal hazards
- Available space near the potential well sites.

In Closing... To Drill or Not To Drill?

- **Depth Group: NO!**

- It's too deep and it would cost too much.

- **Stratigraphy Group: Maybe**

- Regional Comparison perspective:
 - There is a strong possibility
 - More research recommended
- Stratigraphic analysis:
 - Negative chance of deposits because of the sandstone-shale ratio

In Closing... TO DRILL OR NOT TO DRILL?

- Although there are some positive signs, the overall conclusion of the CATALYST participants is that there are not ideal conditions for a drilling operation in Ithaca, New York near the Cornell University campus
